Blueberry

New Thornless **BOYSENBERRY**

Order by Catalog No. N-2815

The most profitable vine fruit in cultivation today, producing better than 6 tons of fruit per acre. Berries average 1½ to 2 inches long and 1 inch thick. Vines are absolutely thornless, so don't confuse this with the old thorny variety. Flavor is a combination of Raspberry, Loganberry and Blackberry, from which it was crossed and originated. An outstanding fruit to serve fresh, for pies, jellies or to put in your freezer. Set plants 6 feet apart each way. Extremely hardy. 5 for \$1.25; 10 for \$2.00; 25 for \$4.00; 50 for \$7.00; 100 for \$12.00. Prepaid.

New Cultivated **BLUEBERRY**

Everybody loves Blueberries, but you really never have tasted any good ones unless you have eaten some of these Cultivated varieties. Fruits are as large as the end of your thumb. Produced in profusion on strong, stately bushes. They are different than most plants, requiring acid soil; therefore, before planting mix a little Peat Moss, sawdust or leaf mold with the soil to keep it acid. Berries grow in clusters like small bunches of Grapes. Sweet and mild with hardly any seeds. Fruit ripens from early July until the forepart of August. Plant no less than two to insure cross-pollination.

FIX

A new scientific discovery that comes in tablet form. Dissolved in water, sprayed on blossoms as soon as they appear on Tomato plants, Cucumber, Melon and Squash vines will make the blossoms adhere to the plant, increasing the yields 25 to 50% above normal. In addition to the increased yield, if sprayed continuously until fruit sets, most of the fruit will be seedless. Four tablets make 1 quart of spray solution. Complete instructions on every package. No. 1748—One Package, 40 Tablets, 50c, postpaid.

227 Giant Feeding Sugar Beet, or Half Sugar Mangel

This magnificent Sugar Beet, while giving nearly as large a yield of easily grown and harvested roots as a crop of Mangels, supplies a food of very much higher nutritive value, the roots for feeding purposes being really more valuable, pound for pound, than those of the very best strains of Sugar Beet, and the yield under equally favorable conditions being more than double. The roots grow partly out of the ground, and because of this and their shape, the crop can be harvested and stored at less expense than any other root crop. We are certain that every one who plants this variety and grows it with care will be much pleased with the crop. Every farmer should try it. 308 New Dry Weather or Danish Giant

Though Cauliflower does best in a cool and moist season, in "Dry Weather" we have a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure. It is of the highest quality, producing large, pure white heads, maturing a little later than Early Snowball. The heads are considerably larger than those of that famous variety. Individual heads weigh 2 lbs each. Pkt. 25c; ¼ oz. 85c; ½ oz. \$1.50; oz. \$2.50; ¼ lb. \$7.00; ½ lb. \$13.00; 1b. \$24.00, postpaid.

309 New Super Snowball

This is the earliest of all varieties we have ever seen. It makes a firm, solid head 6 to 9 inches in diameter in about 85 days after sowing. Even under unfavorable conditions it will head up well, heads forming all at one time, showing a uniformity of size, shape, and type. The plants make a compact dwarf growth. The head is almost round. Has a beautiful pure white, smooth curd. Dry weather does not materially check its growth and therefore is able to resist diseases. Pkt. 30c; ¼ oz. \$1.00; ½ oz. \$1.75; oz. \$3.00; ¼ lb. \$9.00; ½ lb. \$16.00; 1b. \$30.00, postpaid.

287 Condon's Select Danvers "Supreme Strain"

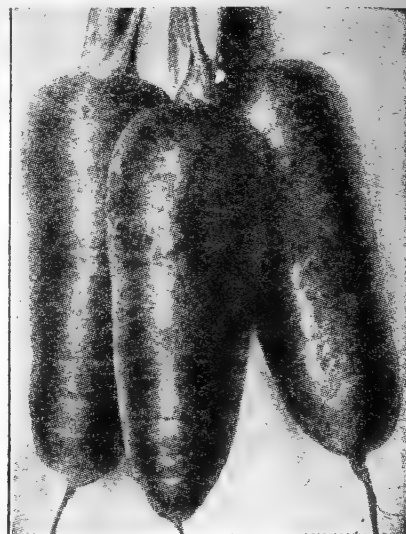

For Critical Market Gardeners and Private Planters
—The Earliest and Sweetest of All Table Carrots
Used Annually by the Largest Planters

Danvers carrots have been the standard for over fifty years and we need not try to offer any proof as to their popularity. Carrot-breeding is in about the same class as stock-breeding, and if same is not kept true, will deteriorate very quickly. We have endeavored to do more than keep the old parent sort true, and have actually bred up the quality of Danvers Carrot to such perfection that the old parent sort would be ashamed of itself. To distinguish our sort from others, we have termed our strain Condon's Select Danvers. Same has been bred for quality and for yield and on a given acreage it has produced a larger crop of marketable roots than any other garden or table variety. The roots are of a rich orange color, crisp and sweet. Pkt. 15c; oz. 30c; ¼ lb., 75c; ½ lb. \$1.35; 1b. \$2.50, postpaid.

The Finest Quality, Largest Eared Sugar Corn
Sweet as Honey, Tender Until Frost Comes

Enormously productive, averaging 3 to 5 fine Big Ears from a single stalk. Ears 8 to 10 inches long, 16 to 18 rows on the cob. Every ear runs uniform, well rounded out both on the tip and the butt. Rockland, Wis., Sept. 6.—Dear Sirs: Please send me another one of your Culture Books and Canning Guide. My first copy met with a damaging accident. I miss it terribly. It is a wonderful concise book. I used it all summer. My garden was a tremendous success. We've had a succession of vegetables from the beginning. My tomatoes from your seeds are beauties, sold several bushels and canned a great many and there are bushels still on the vines. Thank you. Mrs. Lester Hansen.

Lettuce — Condon's Earliest Curled

MARKET GARDENERS' FAVORITE

The Great Outdoor Curled Leaf Variety. Withstands Extremes of Weather Better Than Any Other Variety We Know Of.

The earliest, largest, hardiest, crisp, tender, curled Lettuce in cultivation. Quick money maker for the gardener, and unexcelled for backyard home gardens. We recommend this as one of the very finest early curled varieties. We introduced this in 1912 and it has become more popular each succeeding year. It is vastly superior to the old varieties for green-house forcing, and in our opinion it excels all other varieties as a loose leaf Lettuce for outdoor culture. Makes quick growth, forming large bunches of loose leaves exceedingly tender and very curly. Color light green. Pkt. 15c; oz. 30c; ¼ lb. 90c; ½ lb. \$1.50; lb. \$2.75, postpaid.

Cushing, Okla., Aug. 28.

Condon Bros. Seedsmen.

Gentlemen:—Last year I ordered some of your Supreme Perfection Muskmelon Seed at Springdale, Arkansas. I had some of the Seed left over and planted 70 hills here at Cushing. I don't believe that I had a melon that weighed less than 7 lbs., and many weighed 15 lbs. and over. It was as sweet as sugar, and thin rinded. I have raised lots of Muskmelon in the past, but this melon takes the head of the class.

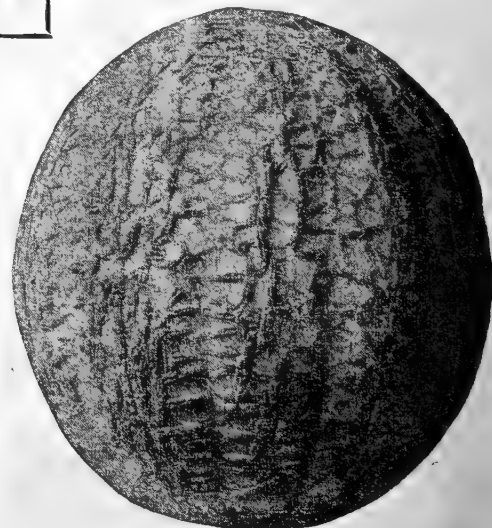

Yours very truly, C. G. BATHE.

The most attractive Muskmelon both from the outside and when cut. Rind is very hard, of a pearly gray color, with faint ribs, heavily covered with a distinctive netting. Ripens to a yellowish shade. Flesh is unusually thick with good flavor. Seed cavity very compact. This new variety includes many of the desirable characteristics of Honey Rock with the added feature of thick flesh that does not soften as it approaches maturity. We highly recommend this variety. Pkt. 12c; oz. 30c; 1/4 lb. 80c; 1/2 lb. \$1.35; lb. \$2.50, postpaid.

500 Kleckley's Sweets or Monte Cristo

Great 80 day Melon—"Sweetest of All"

Wilt Resistant Strain

Suitable for Shipping One to Three Hundred Miles

There is no melon superior in quality to a good strain of Kleckley Sweets. The bright scarlet flesh is the ideal of water melon quality—firm, crisp, entirely free from stringiness or cotton, and "sweet as sugar."

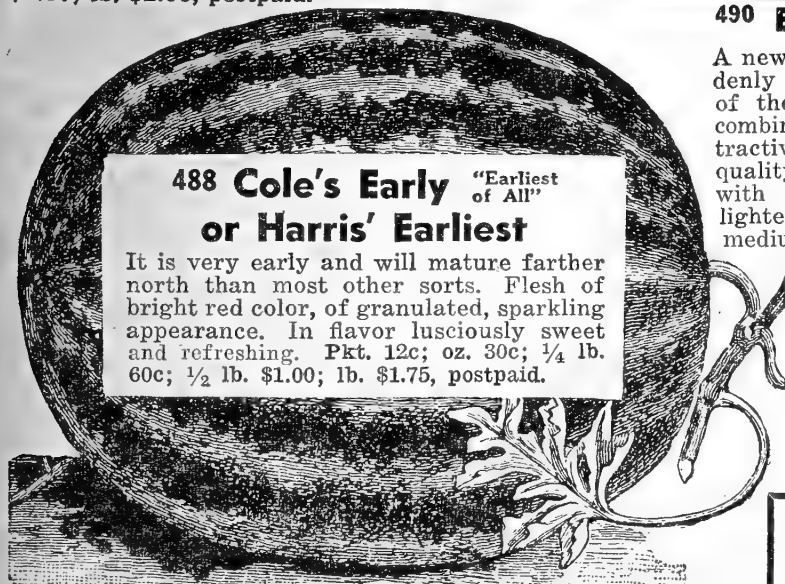

The melon is oblong in shape, about 20 inches in length by 10 to 12 inches in diameter. The skin is a rich dark green; the rind is thin and brittle, and for this reason the melon is not a good shipper to a distance beyond two or three hundred miles, but for home use and nearby market consumption it's got 'em all backed off the list. Our seed is all saved from hand selected, uniform, well shaped, fully matured, ripe melons. This extra care in selecting the melons from which the seed is saved costs a little more than the method generally used but it insures you seed of the highest quality with strong, vigorous germination. Pkt. 12c; oz. 30c; ¼ lb. 60c; ½ lb. \$1.00; lb. \$1.75, postpaid.

2014 New Giant Ruffled Tetra-Snapdragons Superfine Mixed Colors

A new race of Snapdragons created scientifically by treating normal flowers with the drug colchicine, which made a fundamental change in the cell formation, in technical terms changing diploids into tetraploids. This resulted in larger flowers with thicker petals, attractively ruffled, fuller spikes with more florets open at one time, heavier stems and sturdier plants. Each plant produces several stems, the central spikes averaging 2½ ft. Mixture includes a complete range of snapdragon colors in harmonious combinations. Pkt. 25c.

2207 Grandmother's Old Fashioned Flowers

A Blend of Annuals of Which WE ARE Proud

As youngsters you and I remember well whenever we were ready to go home after paying a visit to our Grandmother, it was with a smile that she would say, "Just a minute, Dear, I have something for your Mother," and out into her Flower Garden we would go. Oh! What a garden. There were Asters, Ageratums, Alyssum, Gaillardia, Balsam, Nasturtiums, Poppies, Petunias, Pansies, Salvia, Zinnias, Verbenas, Snapdragons and many other Annuals. It surely was a gorgeous sight. We want all of our customers to have such a garden in their own backyard this summer so we have made a blend, with proper proportions, of all of the above annuals and many more that will give you a rainbow of color in your garden from early summer until frost.

ENORMOUSLY PRODUCTIVE

Often Making Better than 1200 Bushels from One Acre

Condon's White Queen Parsnip is a highly improved type, producing uniformly large and handsome roots of stocky form, heavy at the shoulder, well rounded, gradually tapering to the base, so that they are easily dug, and if grown in properly pulverized soil, the roots will be smooth and free from wrinkles and side roots. The flesh is white, of fine texture, free from core and stringiness, and especially fine flavored, cooking tender, sweet and rich, rendering it one of the finest of table vegetables for winter use. About a fortnight or three weeks before the beds are to be made collect a quantity of fresh horse manure without the straw; place it in a heap under cover, and as it heats keep turning it over once or twice a week, until the fiery heat has become exhausted, which will require from ten to fourteen days' time. When the manure is in a condition to be made up, lay out your bed according to complete easily-understood directions which we send free with each order. About Condon's First of All Tomato

"Your First of All Tomatoes are wonderful I made big money on my crop this year."—Fred G. Deishlie.

Gentlemen:

Dec. 25, Sioux Center, Iowa.

Gentlemen: I am sending you a cluster of your First of All Tomatoes, that I grew this year. This cluster contains ten large luscious tomatoes. Many clusters contained twelve to fifteen tomatoes. I don't see how the vine holds them up. They are the best I ever saw. I make big money on them.—Earl Mouck.

As we had a fine crop of your First of All Tomatoes we had about 2000 plants this year and harvested 500 Bushel of them. We want to praise them very highly, and besides that we enclose a photo of my husband holding a cluster in his hand with 42 well developed Tomatoes on it, and the same vine produced 84 more well grown Tomatoes, and the vine was full of blossoms. We were indeed very well pleased with them. Yours truly, Mr. & Mrs. Ed. Poel.

"GRAND CHAMPIONS"

Throughout The Corn Belt IMPROVED HYBRID SEED CORN

Improvement in Hybrid Seed Corn breeding has developed in the last few years by leaps and bounds. Recognizing the importance of offering only those numbers that have shown outstanding leadership, we have, after a thorough investigation decided to offer to our customers this year 6 outstanding numbers, which we recommend unhesitatingly for the localities mentioned in the descriptions below.

Yellow Hybrids

1276Y LOWE IMPROVED HYBRID 510 (An Early Yellow That Yields BIG)

105 to 110 Days Maturity—Average Yield 65 to 75 Bushels—Well adapted to Northern Nebraska, Iowa, Illinois, Indiana, Southern Wisconsin, Ohio and similar areas.

An early yellow corn with the big yields and long, fat ears characteristic of later corns. Carries a lot of ability to repair injuries made by rootworms. Withstands diplodia stalk rot. Stands well, dries fast, picks easy and does not shatter in picker.

1277Y LOWE IMPROVED HYBRID 514 (Lowe's Yield Champion Yellow!)

110 to 115 Days Maturity—Average Yield 75 to 85 Bushels—Well adapted to Southern Nebraska and Iowa, North Central Illinois, Central Indiana, South Central Ohio and similar areas. About 5 days later than 510.

A fast-starting yellow corn that makes an extremely dark-green dressy plant. Extremely deep-rooted. Does well on thinner ground. Makes "Grand Champion" yields on fertile soil. Longest eared hybrid we know of. Dries down fast. Picks clean and easy. Makes grain of best feeding quality, that grades high and keeps well in crib.

1278Y LOWE IMPROVED HYBRID 840 (The Yellow for "Tough" Southern Weather!)

115 to 125 Days Maturity—Average Yield 85 to 95 Bushels—Well adapted to all South Central Corn Belt Areas from Kansas through Kentucky. About 10 days later than 514.

Bred for the south central corn belt by crossing extremely drought resistant varieties of that area's own yellow corns. Makes a fat, stocky ear on an extremely leafy, dark green plant. Carries ears at medium height. Stands well, picks easy, makes good quality grain. A rather slow dryer.

1309 FUNK'S G-114—HYBRID (Tops the List for North Central Corn Belt)

Some people call it "intestinal fortitude." Others call it simply "guts." Anyway, in G-114, it's the ability to stand up against the beating that the North Central Corn Belt often hands out in weather and in insect attacks. Against cold spring dampness. . . . Against scorching summer drought. . . . Against blasting wind. . . . Against corn borers and other insect enemies, G-114 comes through. Even when harvest is long delayed, G-114 stands, firmly erect. In Iowa 4-year tests, its percentage of lodging was lowest (2.9%) of any strain entered. And it yields with the best. G-114 foliage stays green after the ear starts to mature, making the extra starch necessary to finish both a heavy ear and a strong stalk.

White Hybrids

1280W LOWE IMPROVED WHITE HYBRID 535W

105 to 115 Days Maturity—Average Yield 65 to 75 Bushels—Well adapted to areas in which Lowe 510 and Lowe 514 do well.

A widely adapted white; outstanding for its deep-rooted, sturdy stalk. Makes a broad, rather flinty kernel on a fast drying ear 10 to 12 inches long. Holds ears through harvest. Medium-plant. Carries ear medium-high.

1298W LOWE IMPROVED WHITE HYBRID 865W

115 to 125 Days Maturity—Average Yield 75 to 85 Bushels—Well adapted in areas where Lowe 840 does well. About 7 days later than Lowe 535W.

A big yielder! Grows tall and gives record performance on soils of varying fertility. Strong stalk. Stands up. Ears average more than 12 inches long. Makes a broad, shallow, pearly kernel.

For Prices on Above Hybrids, See Farm Seed List Enclosed.

2 Great Perennial Legume Crops!

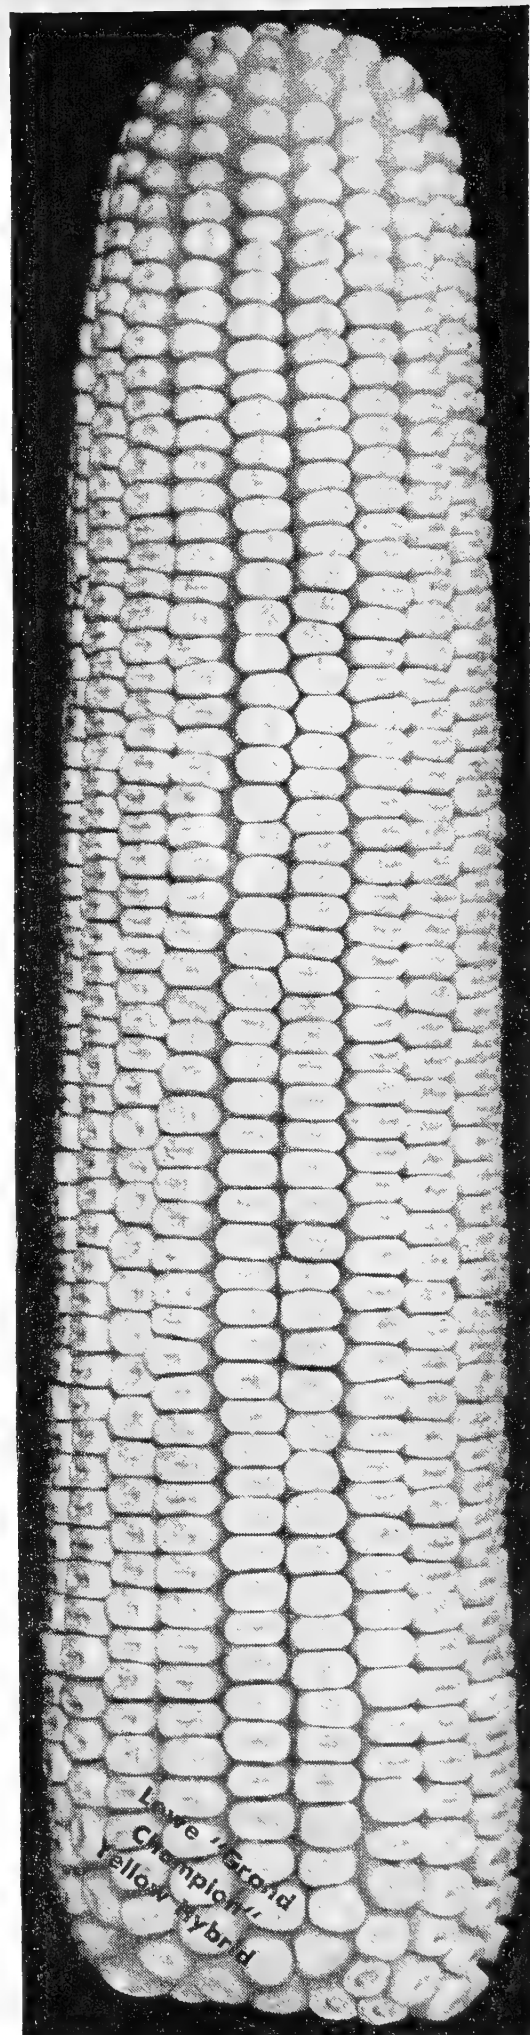

**That All Farmers Should Sow and Be Assured of Excellent
Pasture Throughout the Summer Months.
Seed Supply Is Limited—So Order Early.**

1200 Broadleaf Birdsfoot Trefoil

A long life, deep rooted legume that will grow on poor or rich soil. Will grow on light sandy and gravelly soils, as well as heavy clay and will stand a moderate amount of alkali. Provides the finest feed when most other pasture grasses and clovers are dormant. Plants grow stems 12 to 30 inches long. Has a deep tap root with many branches. Crop resembles fine stemmed Alfalfa, and is high in mineral and protein content. Sow 5 lbs. per acre alone. However, we recommend sowing 2 lbs. in mixtures of other grasses such as Timothy, Blue Grass, Orchard Grass, or Brome Grass. If sown alone it has a tendency to mat. Shallow sowing, $\frac{1}{4}$ to $\frac{1}{2}$ inch no deeper, in well prepared seed bed is essential. $\frac{1}{2}$ lb., \$1.00; lb., \$1.90; 2 lbs., \$3.60; 5 lbs., \$8.50, postpaid.

1234 Ladino Clover

Ladino Clover is a perennial form of Giant White Dutch Clover which spreads by surface runners that root at the joints. The main branch of the runners lie flat on the ground, but the leafy stalks which produce the foliage grow from 15 to 24 inches tall and the leaves resemble in size and shape those of Red Clover. Excellent for pastures, and should not be sown alone except for seed purposes. Excellent for lowlands that are not wet, and for pasture recommend a mixture of 2 lbs. of Ladino, 3 lbs. Medium Red Clover and 8 lbs. of Brome Grass. On upland 1 lb. of Ladino Clover mixed with 8 lbs. of Alfalfa, 3 lbs. Red Clover and 8 lbs. Brome Grass will give you a wonderful pasture that will last about 4 or 5 years. $\frac{1}{2}$ lb., \$1.75; lb., \$3.40; 2 lbs., \$6.70; 5 lbs., \$16.50, postpaid.

Excellent for pasture and grazing—makes 2 cuttings a season—yielding 5 to 7 tons per acre. Valuable new perennial hay and pasture crop especially desirable for low, marshy land. Highly recommended by the Wis. and Minn. Experiment Stations.

CULTURE. Sow in early spring, alone or with grain, 4 to 6 pounds of seed per acre broadcast, or 2 to 3 pounds with drill. Late summer and late fall seeding are also recommended. When grown for hay, two good crops can be obtained in one season. Sow 20 lbs. per acre. Postpaid, 1/2 lb., 40c; lb., 75c; 2 1/2 lbs., \$1.75; 5 lbs., \$3.25. 1254 CLOVER—WHITE DUTCH

Fancy Recleaned Native Seed

White Clover is a low, smooth, perennial herb arising from a straight tap root. The plant possesses creeping stems which develop adventitious roots at the nodes. It is this feature which enables clover to spread rapidly and which makes it so desirable in lawns and playing grounds. It withstands greater temperature extremes than either Red Clover or Alsike. Naturally suited to cool, moist regions, it is also rather tolerant of shade. Postpaid, 1/4 lb., 40c; 1/2 lb., 70c; lb., \$1.35; 2 1/2 lbs., \$3.25; 5 lbs., \$6.25.

1399 RYE GRASS AMERICAN GROWN

For Early Seeding and Quicker Crops

If you want a quick hay or pasture crop this year, Rye Grass fills the bill. It starts quickly and keeps on the job all summer. It produces lots of feed. It is a grass somewhat like Kentucky Blue Grass, only it grows much taller and the leaves are broader. Experiment Stations recommend using Rye Grass. It is becoming more popular every year. Sow 20 to 25 lbs. per acre when sown alone. Postpaid, 1/2 lb., 25c; lb., 45c; 2 1/2 lbs., \$1.05; 5 lbs., \$2.00. For Larger Quantities See Wholesale List Enclosed.

1336 COLONIAL OR ASTORIA BENT GRASS

This strain of American Grown Bent Grass is recognized as the finest quality obtainable. It is especially suited for lawns and golf courses, being perfectly hardy, producing a dense velvety green carpet that withstands much trampling. For putting greens on golf courses, it is generally sown in beds and when established, dug up and the stolons, or individual plants are set in the putting greens 4 or 5 inches apart, as it spreads rapidly and eventually makes a solid turf of the finest texture of low growing grasses. For seeding in home lawns, we prefer sowing the seed at the rate of 1 lb. to 200 square feet. Postpaid, 1/2 lb., 75c; lb., \$1.45; 2 1/2 lbs., \$3.50; 5 lbs., \$6.75. For Larger Quantities See Wholesale List Enclosed.

1330 RED FESCUE—NEW CROP SEED

Very valuable grass for sowing on sandy soils or in shady positions; now recognized as one of the leading grasses for putting greens and fairways. It is a perennial with a fine blade and a spreading root system, making a compact turf of a dark green color. Sow either in spring or fall at the rate of 1 lb. to 200 square feet. Postpaid, 1/2 lb., 50c; lb., 95c; 2 1/2 lbs., \$2.25; 5 lbs., \$4.25. For Larger Quantities See Wholesale List Enclosed.

SWEET CLOVER Highest Quality Lowest Prices

60 Lbs. per Bu.—1 Bu. Will Sow 4 Acres Nicely

The first green feed in the spring. The last green feed in the fall. Will grow on almost all classes of soil. Greatest fertilizing plant in existence. As a hay and pasture crop it has no equal. Makes wonderful milk producer. Sow 15 lbs. per acre in spring with all small grain. When grain is cut, you have excellent pasture all during dry summer when most pastures are dried up. Under Federal Seed Act Ruling Sweet Clover commonly known as White Blossom, which is the tallest variety and two weeks later than Yellow Blossom Sweet Clover, cannot be labeled White Blossom Sweet Clover Seed if there is a slight trace of Yellow Blossom Seed in it. To avoid any possibility of misunderstanding we label and offer this as "Mostly White Sweet Clover Seed Northern Grown, Purity Brand" and highly recommend it for pasture and a soil building crop.

1262 "Mostly White" Northern Grown—Purity Brand

This is considered the finest type or strain of Northern grown, hardy, refined tall common Mostly White Sweet Clover Seed. Purity better than 99.25%, Germination better than 90%. Postpaid, ½ lb., 35c; 1 lb., 65c; 2½ lbs., \$1.50; 5 lbs., \$2.75. For Larger Quantities See Wholesale List Enclosed.

1268 Yellow Blossom "Purity Brand"

Purity better than 99.25%—Germination better than 90%

Two weeks earlier than the Tall Common Mostly White Sweet Clover described above. It is a biennial, just like the Tall Sweet, but it does not grow quite as tall. However, it produces a high quality hay and lots of it. It is a wonderful soil builder, and in addition it is better for pasture than the Common as it stays green longer. Postpaid, ½ lb., 35c; 1 lb., 65c; 2½ lbs., \$1.50; 5 lbs., \$2.75. For Larger Quantities See Wholesale List Enclosed.

1260 Hubam Type Sweet Clover (Annual) "Purity Brand"

Hubam Sweet Clover looks like the biennial listed above and grows very similar, except that it grows four times as fast and when seeded in early spring attains a growth of 4 to 5 feet by September. Postpaid, ½ lb., 40c; 1 lb., 75c; 2½ lbs., \$1.75; 5 lbs., \$3.25. For Larger Quantities See Wholesale List Enclosed.

1231 Brome Grass—"Purity Brand" Hardy Perennial

Marvelous drought defying hardy grass that makes excellent combination hay, seeded alone or with Alfalfa. Recommended by the Michigan Experiment Station. Sow in spring or in early August 5 lbs. of Bromus with 10 lbs. of Alfalfa. Don't pasture until fairly good top growth develops. Cattle will actually eat the Brome Grass first, allowing the Alfalfa better chance to get established. If seeded alone sow 20 lbs. per acre. Has given excellent satisfaction even on light sandy soils in northern Michigan. An extremely hardy perennial grass we highly recommend either for hay or pasture. Postpaid, ½ lb., 40c; 1 lb., 75c; 2½ lbs., \$1.75; 5 lbs., \$3.25. For Larger Quantities See Wholesale List Enclosed.

CLOVER-LESPEDEZA-ANNUAL and PERENNIAL

1243 Korean Lespedeza Annual

AN EARLY DROUGHT-RESISTANT
SOIL-BUILDER

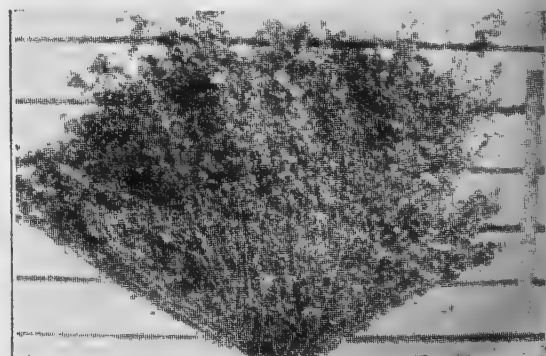

Does Especially Well in High Altitudes. Greatest Annual Pasture or Hay Crop Ever Introduced.

The abundant growth and deep penetrating roots covered with nodules make it an outstanding grazing and soil-building legume. The strong root growth penetrates about 8 inches deep, making it highly drought-resistant, and thrives on poor, wornout soils where alfalfa and clovers would fail. In feeding value it is about equal to alfalfa; has no woody stem; holds its leaves well and produces a full crop the first season. A harrowing before sowing is the only preparation necessary. Postpaid, ½ lb., 35c; lb., 65c; 2½ lbs., \$1.50; 5 lbs., \$2.75. For Larger Quantities See Wholesale List Enclosed.

1245 Lespedeza (Sericea) Perennial

The new permanent Clover introduced by the U. S. Dept. of Agriculture. Perennial legume which grows on poor land and acid or sour land as well as rich land. After established, it is a great drought-resister with an enormous root system. It enriches the soil, lives through the winter, starts growth early in spring and gives at least 3 cuttings a season with as high as 3 tons per acre at one cutting of hay. All kinds of stock relish the hay, and it may be closely grazed. We do not recommend Sericea in latitudes North of Springfield, Illinois.

Sow rather shallow in the spring or fall in well prepared, warm soil 4 lbs. per acre in drills or 12 lbs. per acre broadcast. Postpaid, ½ lb., 40c; lb., 75c; 2½ lbs., \$1.75; 5 lbs., \$3.25. For Larger Quantities See Wholesale List Enclosed.

The Great Lespedeza Clover

Profitable Forage and Hay Crops

1343 Canadian Field Peas

Illustration to left shows field of Canadian Peas and Oats yielding 5 tons per acre 60 days from planting.

Canadian Field Peas and Oats seeded in the early spring at the rate of 1 bushel of each per acre, make the best extra early annual hay crop. This combination makes an average yield of 2 18/100 tons of excellent feed per acre. Feed is almost equal pound for pound to Clover Hay. It is relished by all live stock. Canadian Field Peas are extremely hardy; therefore may be seeded very early along with your Oats. They may be broadcast or sown with a grain drill, but be sure to cover the seed about 1/2 inch deep in either case. If you want this for a hog pasture suggest you add 5 lbs. of Dwarf Essex Rape per acre. Postpaid, lb., 45 cts.; 2 1/2 lbs., \$1.00; 5 lbs., \$1.75. For Larger Quantities See Wholesale List Enclosed.

Sugar Cane for Fodder

1333 Cow Peas Mixed Whippoorwill-Type (Bu. 60 lbs.)

When danger of frost is over sow broadcast 1 Bu. per acre or 45 lbs. in drills 36 inches apart. Cow Peas produce one of the largest and the most nutritious forage crops grown. When turned under, they furnish nitrogen and generally enhance the fertility of the soil. They make a fine feed for work and beef-stock and for dairy herds, and are nearly equal in value to alfalfa and wheat-bran. Postpaid, lb., 55 cts.; 2 1/2 lbs., \$1.25; 5 lbs., \$2.25. For Larger Quantities See Wholesale List Enclosed.

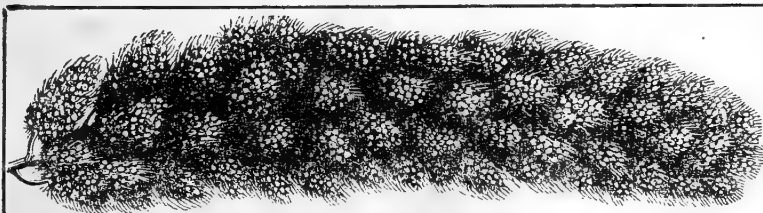

Cow Peas Whippoorwill

1416 Sugar Cane for Fodder

Makes Wonderful Silage. Often Yields 30 Tons Per Acre. Sow 20 lbs. Per Acre in Drills, 50 lbs. Broadcast.

Every farmer should have at least 5 or 10 acres of our Fodder Sugar Cane, a most profitable crop. It produces as much as 30 tons of green feed per acre. It makes wonderful silage either alone or drilled with Corn, improving feeding value of Corn fifty per cent. Prices very reasonable this year. Postpaid, lb., 45 cts.; 2 1/2 lbs., \$1.00; 5 lbs., \$1.75. For Larger Quantities See Wholesale List Enclosed.

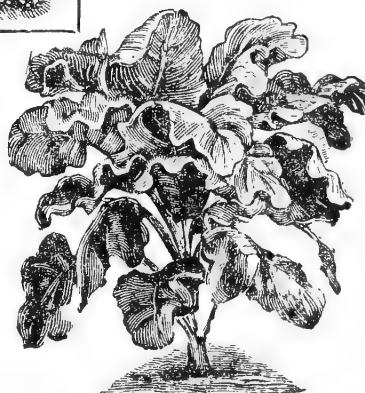

Millet When Corn fails you or when Season is too wet for Corn on low bottom ground here is the one crop you can sow as late as July and harvest a Big Crop of excellent hay.

1356 Millet—Golden Beauty (Bu. 50 lbs.)

The most popular and most widely grown variety. Wonderful milk producer, big yielder of good palatable hay. Sow 3/4 bu. per acre. Postpaid, lb., 45c; 2 1/2 lbs., \$1.00; 5 lbs., \$1.75. For Larger Quantities See Wholesale List Enclosed.

1358 Billion Dollar Grass (Bu. 35 lbs.)

One of the best forage crops for feeding all kinds of livestock. High in milk-producing qualities, being rich in protein and fats. Combined with soy beans, as ensilage, it makes an ideal balanced ration (two parts of millet to one of soy beans). Adapted to all sections of the country; it makes more hay than any other millet, and requires less seed. It is the ideal catch crop, and may be sown from May to July. For hay, cut it just before it blossoms, and cure the same as clover. It also makes good pasture, but the cattle must be accustomed to it gradually. Postpaid, lb., 45 cts.; 2 1/2 lbs., \$1.00; 5 lbs., \$1.75. For Larger Quantities See Wholesale List Enclosed.

1382 Rape-Dwarf Essex

New Low Prices

Farmers' Friend, Hogs' Delight Have At Least 5 Acres This Year

Rape is an annual forage plant of great value, profitable in all sections of the country. It can be grown to advantage on land which has already produced an early grain crop like oats, rye, or winter wheat.

Rape provides excellent pasture for all kinds of live stock, cattle, hogs and sheep. It can be sown at any time during spring or summer, so a good pasture can be had whenever it is needed. Sow 8 to 10 lbs. per acre broadcast. Postpaid—1/2 lb., 30 cts.; lb., 50 cts.; 2 1/2 lbs., \$1.15; 5 lbs., \$2.00. For Larger Quantities See Wholesale List Enclosed.

Sudan Hog-Pasture

If you're going to be short on legume pasture for your hogs next summer, sudan grass is worth thinking about.

Tests at Purdue University show that, although sudan is not quite as good as alfalfa, it does make cheaper and faster gains than dry-lot feeding. Sudan grass saved 2.7% on corn, and 18.1% on protein over similar pigs fed out in dry-lot.

It's about impossible to beat good alfalfa for hog pasture. In the same test alfalfa saved 6.4% on corn and 22.3% on protein over dry-lot.

All legumes are good, but alfalfa is king.

1413 Sudan Grass Wonderful Quick Hay Crop

One of the best annual forage plants ever introduced, suitable for almost any locality. Sudan Grass thrives best on rich loam, but has been grown successfully on almost every kind of soil, from heavy clay to light sand. Cold, wet, boggy soils are not suited to Sudan Grass.

Sudan Grass is a sorghum, and an annual, without underground root sprouts. It grows 4 to 5 feet high in drilled seedings, and 5 to 8 feet in cultivated rows. Do not sow Sudan Grass before corn planting time. Like corn, it is a warm weather crop. In favorable seasons, the growing period is long, and several cuttings can be obtained in one season. For hay it is ready to cut in 60 to 75 days, when it is in full head. It continues its growth, and in 40 to 45 days it is ready for another cutting.

Sudan Grass is an enormous yielder, producing 3 or 4 tons of hay at the first cutting. The second cutting is lighter, and the hay is much finer. Live stock of all kinds will eat the hay readily.

For hay, sow at the rate of 20 to 30 lbs. per acre, using a grain drill, and cover from one to one and one-half inches deep. Heavy seeding makes finer quality hay. Postpaid, lb., 45c; 2 1/2 lbs., \$1.00; 5 lbs., \$1.75. For Larger Quantities See Wholesale List Enclosed.

Sudan Grass

1227 Buckwheat-Japanese (50 lbs. bu.)

The very finest variety. A most profitable crop for all Northern farmers; does well even on light soils. Sow any time until July 1, using 36 lbs. of seed per acre if drilled or 50 lbs. per acre broadcast. Postpaid, lb. 45c; 2 1/2 lbs. \$1.00; 5 lbs. \$1.75.

For Larger Quantities See Wholesale List Enclosed.

1418 SWEET SUDAN GRASS

This new introduction has been bred to produce a higher sugar content than the common strain and, therefore, much superior for livestock feeding. Developed by Texas Agr. Station, but up to the present time only limited supply of seed is available so please order promptly that we may serve you on some of this new forage crop before supply is exhausted. It is more disease resistant than the old Sudan and being of sweeter quality the stock eat it down first. Produces more plant growth than common and remains green longer. Sow 20 lbs. of seed per acre. Postpaid—1/2 lb., 30 cts.; lb., 50 cts.; 2 1/2 lbs., \$1.15; 5 lbs., \$2.00. For Larger Quantities, See Wholesale List Enclosed.

The New Clinton Oat

Certified Seed Oats

The New Clinton

The New Helminthosporium Resistant Oat

Clinton is the new introduction of the University of Iowa. It was developed co-operatively by the Iowa Station and the United States Department of Agriculture and jointly distributed by the Iowa, Illinois, and Indiana station. Clinton is outstanding for yield, tests weight, and strength of straw. Many report better than 85 bushels per acre. Measured weight 35 lbs. or more per bushel right from the combine. It is a medium tall, yellow, early oat with plump kernels and thin hulls. On account of its stiff strong straw Clinton tops the list for heavy soils where lodging has been troublesome. Clinton is resistant to halo blight and helminthosporium leaf blotch disease which cause seedling blight and leaf spots, thereby cutting down the ability of the plant to produce a good crop.

1374—Clinton Certified Seed. Postpaid, lb., 40c; 2½ lbs., 95c; 5 lbs., \$1.75.

The Great Vicland

Wisconsin's Newest and Heaviest Yielding
Rust and Smut Resistant Oat

Vicland was developed by the Wisconsin Agricultural Experiment Station from a cross between Victoria, a South American Oat, and Richland, a variety that originated in Russia. Vicland is a very heavy yielder. Many customers report average yield better than 80 bushels per acre. Measured weight, 34 to 36 lbs. per bushel. It's an early yellow short straw, but on fertile soil the straw grows to a good height. Not recommended for soil low in fertility as the straw is apt to be too short to cut with a binder. When shocked it will stand for a long period without germinating. A distinct advantage in rainy weather.

1372—Certified Seed. Postpaid, lb., 35c; 2½ lbs., 80c; 5 lbs., \$1.50.

Forage Crops Every One Should Grow, One Acre Will Produce Tons of High Quality Feed

1340 Feterita

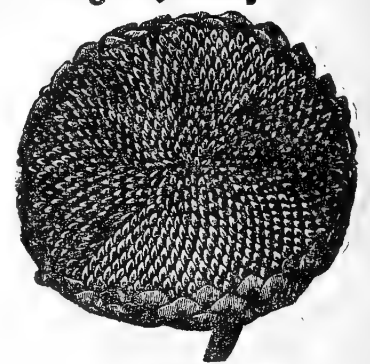

The great advantages Feterita has over Kaffir corn and all other plants of that class are its extreme earliness and great drought resisting qualities. Feterita is from 20 to 30 days earlier than Kaffir corn, makes excellent fodder and produces a large grain crop. Plant 15 lbs. per acre in drills. Postpaid, ½ lb. 25c; 1 lb. 40c; 2½ lbs. 85c; 5 lbs. \$1.50. For Larger Quantities See Wholesale List Enclosed.

1348 Hegari

This is a sweet sorghum somewhat similar to cane. Very nutritious. Valuable for grain, dry fodder, ensilage and pasture. Yields up to 5,000 lbs. of grain per acre and up to 18 tons of ensilage. Live stock, especially cattle, are very fond of it due to its sweet taste. For grain production drill like Kaffir 6 to 8 lbs. per acre. For hay, drill in close rows at 75 to 90 lbs. per acre. Postpaid, ½ lb., 25c; 1 lb., 40c; 2½ lbs., 85c; 5 lbs., \$1.50. For Larger Quantities See Wholesale List Enclosed.

1349 Kaffir Corn

Makes splendid feed for poultry, fed either in the grain or ground and cooked. Foliage and stalk make excellent forage. Cultivate the same as common corn. Plant 15 pounds of seed per acre in drills. Postpaid, ½ lb., 25c; 1 lb., 40c; 2½ lbs., 85c; 5 lbs., \$1.50. For Larger Quantities See Wholesale List Enclosed.

1345 Grohoma

A Cross Between Cane and Kaffir. Greatest drought resister. Very heavy producer. Cattle like it. Wonderful feed. Grows strong and erect. Most popular forage of recent introduction. Excellent pasture. Drill double rowed, using 18 to 20 lbs. per acre. Postpaid, ½ lb., 25c; 1 lb., 40c; 2½ lbs., 85c; 5 lbs., \$1.50. For Larger Quantities See Wholesale List Enclosed.

1346 ATLAS SORGO

A cross between Kaffir and Sourless Cane. Stalks, which grow 7 to 8 feet, and the leaves are juicy, sweet and palatable, making it an excellent silage crop. Has produced 20 tons silage per acre that is relished by all live-stock. Plant 15 lbs. per acre in drills or 50 lbs. broadcast. Postpaid, ½ lb., 25c; 1 lb., 40c; 2½ lbs., 85c; 5 lbs., \$1.50. For Larger Quantities See Wholesale List Enclosed.

1362 Milo-Maize

Forage Plant of Great Merit. Belongs to the Non-Saccharine Sorghums. It is pronounced the best and surest grain crop for dry countries and seasons, even better than Kaffir corn. It grows several smaller heads on side shoots, often as many as eight heads on a stalk. Very valuable for feeding stock and proves a gold mine for chicken feed. Plant 15 pounds per acre in drills. Postpaid, ½ lb., 25c; 1 lb., 40c; 2½ lbs., 85c; 5 lbs., \$1.50. For Larger Quantities See Wholesale List Enclosed.

SUNFLOWER
1419 Mammoth Russian

A small patch of cultivated sunflowers will produce a great quantity of the very best poultry feed for winter. Drill in rows, cut with a corn harvester, dry thoroughly, and let the fowls do the threshing. Postpaid, ½ lb., 35c; 1 lb., 60c; 2½ lbs., \$1.45; 5 lbs., \$2.75. For Larger Quantities See Wholesale List Enclosed.

SOY BEANS

Corn is still king, but Soy Beans are a close second and with new improved varieties coming into being frequently and the many new purposes to which Soy Beans are adapted it may not be long until this crop will surpass any individual farm crop in dollar value.

There is a reason for all of this. They are adapted to a great, wide variation of soil and climatic conditions. They give universal satisfaction in more places than any other individual crop. They stand extremes of weather better than the average crop. They may be broadcast in fields relatively free from weeds and will yield abundantly, and when planted in this manner are adaptable for combine threshing.

There is Big Money in Soy Beans. The great need for Soy bean oil has created a tremendous market for beans. The oil has a great many uses. The demand will continue strong for many years. Oil meal is used as a valuable protein supplement in feeding live stock. As a hay crop soy beans outyield Red Clover and is equal to it in feeding value. They make a fine green manure crop. Soy beans alone or with Sudan Grass may be used for summer pasture.

A good portion of the crop is generally planted in rows and cultivated one way, sowing ½ bushel seed per acre. Some folks report 5 to 8 bushel yield more per acre when seeded broadcast on good clean land and others report just the reverse. Either method of sowing is satisfactory but unless your ground is nearly free from weeds we recommend drilling in rows and cultivating one way.

If you sow broadcast figure on using 1 bushel of seed per acre.

Another good way to plant Soy Beans is in combination with Corn, dropping one or two Beans in each hill of

Corn and when you cut the Corn for Silage the Soys furnish the balance ration of food equal to cotton seed meal. If you don't have a silo, put Soys in Corn anyway and after harvesting the Corn turn the stock in to get the stray ears and Soys, and believe me you will be surprised how all the stock will relish them.

As a Hogging Down Crop, Soys and Corn beat the world. Soy beans also make an excellent Hay Crop. They should be cut just as the pods are formed before the Seed is fully developed so as to prevent the shattering off of the leaf, which is most valuable.

Inoculation. We recommend that you inoculate all of your Soy Beans; in fact, all of your legume crops, such as Alfalfa, Clover, Soy Beans, Cow Peas, etc. It will increase your yields. Nitragin is really the outstanding inoculation and the prices are very reasonable, as you will note from the listing above.

You will find on our wholesale price list enclosed in this catalog the leading varieties of Soy Beans that we recommend for the general Corn Belt. Supplies are limited this year with active demand, so please get your orders in early.

**Seed Potato
Eyes Cannot
Be Shipped
to Calif.**

For upwards of half a century, we have been producers and distributors of high grade Seed Potatoes to customers throughout the nation.

Railroads are now so congested that shipment of perishable goods like Potatoes in less than carlots to distant points, with the excessive freight rate that now applies, is not a practical procedure from the planter's standpoint for the following reasons:

1st. Customers living in the extreme West, South and Southeast require their Seed Potatoes in early February and at that season of the year, we cannot ship by freight in less than carlots on account of freezing weather. If shipped by express, the charges are excessive. Later in the season when our weather moderates so that we can ship Potatoes by freight, the delay in transportation prevents their arriving in ample time for early planting.

Until these conditions adjust themselves more favorably with quicker dispatch by freight or lower express rates, we are discontinuing the handling of the full tuber of Seed Potatoes, recommending to our customers,

who want only reasonable quantities for their own private planting, to buy Potato Eyes, which are all cut from Pure Bred Seed, carefully packed and shipped by parcel post direct to your door at proper time for planting.

These Potato Eyes will give just as good satisfaction as if you had the original tuber and did your own cutting.

We offer the following outstanding varieties of Seed Potato Eyes:

**1630 Improved
Extra Early Ohio**

Very early, extra fine cooking quality, heavy yielder. Skin is light reddish-pink, smooth. Flesh is white, firm, fine grained.

1632 Irish Cobbler
Fine Early Potato—Resistant to Blight

Tubers are nearly round and slightly flattened. The skin is white, with deep eyes.

**1631 Improved
Green Mountain**

One of the best late sorts, yielding big crops of large, smooth, white skinned tubers, oblong to roundish shape.

1626 Chippewa

A new late heavy yielding variety, resistant to mild mosaic. Skin white, smooth, shallow eyes.

**Potato Eyes By Mail to Your
